FOX – Double Bay Front Rear Access with End Bay External Cabinet.

FDMS 650 double bay Front Rear Access with End Bay Cabinets are designed for external use, manufactured from 2mm thick 4003 stainless, the fully welded Construction ensures the Cabinets are robust and suitable for heavy-duty applications.

The fully adjustable rail system allows the 19" vertical rails to be fitted at the front and rear of the cabinet which can be set by the customer offering a wide range of depths for equipment mounting.

FDMS 650 double bay Front Rear Access with End Bay Cabinets are supplied with a set of 19" vertical rails Front and Rear, complete with cable management fitted along the side of the righthand vertical rails both front and rear.

Ventilation is provided through louvres manufactured within the front lower sections of the doors. The cabinets are supplied with three thermostatically controlled fans in the roof in both bays and a single fan assembly in the end bay, all extraction points protected with mesh screen to prevent against vermin and insects.

FDMS 650 Cabinets are designed to be bolt directly to a concrete slab, increased height can be achieved for the likes of battery storage by adding an extension plinth.

Cabinet 650 double bay Front Rear access with end bay comes complete with 3-point locking secured by a secondary security key lock, as a single module it is part of a much larger family of our cabinets, please refer to our website www.fdns.co.uk for details.
